Juki Central Europe (JCE), a subsidiary of Juki Corporation, was established in 2005 as the official body coordinating sales and logistics across twenty European countries as well as Russia, North Africa and Turkey. From the company offices in Warsaw, Poland; sales, marketing, logistics and technical support services are coordinated for the entire extended European market-place. The company's strengths are leveraged through an extensive distributor network that has been established over the years, offering the shared knowledge and expertise of industry leading experts in the sewing sector.

To Juki Central Europe's different offices in Russia, Turkey and JUKI Italia S.p.A, in 2022, joined new office in France to expand dynamically our network supporting and maintaining the Juki brand across the continent and beyond.

Juki offers an extensive line of industrial sewing machines for the apparel industry – ranging from Lockstitch, Overlock and Coverstitch machines, to electric bar tackers and automated sewing systems.

In non-apparel industry, the willingness to expand the offer and meet growing customer needs for non-apparel applications prompted us to merge the brands - Juki joined forces with Mitsubishi, which gives more possibility to offer wide ranges of non-apparel machines for variety of needs.

Software solutions such as **JaNets (Juki Advanced Network Systems)** is the next frontier of sewing innovation and aims to bring your production into the future with interlinked machines and data to make analytical decisions.

As well as our extensive range of high quality industrial sewing machines **Juki** produce machines for the semi-professional and home-use market with our home sewers and surgeons establishing themselves as some of the most popular and reliable in the market.

We are very proud of our historically strong distribution network across Europe and throughout the rest of the world. From **Juki Central Europe's offices in Warsaw** and through our representative offices we are able to serve the entire extended European market and North Africa. Through our carefully selected distributors we are able to combine knowledge and specific geographical market

experience to ensure the best sewing solutions are available to customers. Leveraging both our own expertise as well as that of our distributors we are able to provide insights and assistance that can improve end users productivity and quality.

Here in **Juki Central Europe** we constantly have one eye on the future and are looking to improve not only our own business but that of our customers and anyone who uses a **Juki** sewing machine. Our products are developed and manufactured with a consumer viewpoint in-mind at all times and it is our goal to build strong, lasting customer relationships. We will continue to provide products and services by taking our customers' needs and desires into account, by treating our customers as partners, through which we will create value together.

**Juki** was founded in 1938 when nearly 900 independent machinery manufactures came together to form the "TOKYO JUKI MANUFACTURERS ASSOCIATION". It wasn't until 1943 that this association was reorganized into a joint stock corporation. In this time Juki focused on other production types but in 1947 we produced our first sewing machine for the household market. This was followed by the first Juki industrial sewing machine in 1953 and decades of industry dominance thereafter. Juki has been at the forefront of sewing machine innovation over its lifetime with many of our advancements being adopted industry wide. To name just a few of our more famous improvements: the single-axis rotational thread take-up (1957), automatic Thread Trimmer (1969), pick-and-placer (1987), automatic bobbin thread feeder (1997), multifunctional machine digitalization (2015). This is just one milestone for Juki and we look forward to continuing our journey far into the future.

## About Juki

The Juki supplies more than 170 nations with sewing equipment and related products and with established logistic networks we have the ability to supply the world with the best quality products. The Juki Corporation headquarters is located in Tokyo, Japan, with subsidiaries worldwide assisting in its sales, logistics and technical functions.

Juki's slogan: "Smart Solutions" reflects the global philosophy of providing customers with the highest quality solutions and services according to their specific needs. Juki has committed itself to creating products from the customers viewpoint with the conviction that we can learn from each other to create value together.

## Why Juki

**The Juki brand is synonymous with quality and every machine produced under this name will be able to perform time and time again.** Juki correctly evokes the perception of quality made Japanese machinery and we strive to create new values through "Monozukuri" (the art of product-making). Everything from the machine heads to the individual parts is made to our best ability and to the highest quality.

Consideration for the environment is an essential factor in the design and development of Juki industrial sewing machines. As such, sewing machines are designed to reduce noise, save energy and help prevent environmental pollution. To ensure we can carry these activities out to the best of our ability Juki has defined an Environmental Philosophy as well as an Environmental Action Plan.

The Juki Sewing Institute is a division of Juki Corporation that provides custom support for factories and end users. They provide services such as seminars, consulting, and information service with consideration given to customer's productivity, technology as well as safety.

Depending on the function and process required by a factory there are different methods of bonding that achieve different results or seams. This technology can be used as a replacement for traditional stitch's (attaching fabric to fabric) but also to improve normal stitched seams strength and durability (sealing).

Creation of seams is carried out by a number of different methods but in all process one piece of fabric is fused to another piece. Sealing of seams uses special tape applied over an existing seam (either stitched or bonded) to make it stronger or waterproof.

## Tape Bonding / Seam Sealing

The hot air activates the adhesive of the specialized bonding tape fusing the tape to the fabric. Tape can also be applied on top of normal stitched seams to make them waterproof and more durable.

JEUX AI-107 spec A-NNN

## Ultrasonic Welding

Ultrasonic vibration causes the material to heat up and fuse together. A ultrasonic vibration from the horn cause mechanical stress within the materials that release thermal energy softening the points of contact and bonding the material together. Bonding only takes place at the points of contact between the horn and anvil. Polyester, nylon, polypropylene, polyethylene, PVC, urethane, saran, EVA, and surlyn can all be bonded ultrasonically.

JEUX US-511

## Press Bonding

This uses both a hot and a separate cold plate to create a bond; it is capable of being used to fuse fabric to fabric (attaching) or with join with tape (sealing). Firstly the hot plate is applied to the product and pressure and heat are exerted. This causes the fabric to fuse or bond together (if tape is being used it melts). Secondly the cold plate is applied and this exerts even more pressure on the now melted seam and cools it simultaneously solidifying the bond.
